Month and year	

CPU HACCP RECORDS

GUIDELINES FOR COMPLETING THE DUE DILIGENCE

It is the intention of Giggling Squid to ensure that every effort is made to deliver the highest standards in food safety and quality.

All details/records relating to daily/weekly operation must be accurately recorded in this book. Failure to implement all internal controls as laid down in our HACCP could lead to potential legal exposure for the Company. Members of management must maintain and audit the records on a daily basis.

USING THE PROBE

The following procedure must be followed when using a Calibrated Food Probe (see weekly routine for probe calibration)

- Switch on the probe
- Clean the probe with a sanitising wipe before use
- Place the probe into the food & equipment that requires checking
- Make sure the probe is placed in the middle of the food and that the probe is not touching the metal
- Leave the probe to stabilise for a couple of minutes before taking the reading
- Record the temperature reading exactly as it states on the display and ensure that it is within the tolerable critical limits – see below
- Remove the probe from the food and clean with a fresh sanitising wipe

USING THE INFRARED THERMOMETER

Infrared thermometer must be used for taking the surface temperature of the cold food only.
You must not use the infrared thermometer for the hot food.

What happens if the temperatures are not right?

If, when you are taking the temperatures, they are not within the specified limits then you MUST:

- Notify the Manager
- Your manager will instruct what remedial action is to be taken to rectify the situation

INTAKE TEMPERATURES FOR RAW MEAT:

Check two bags per product
Max Temperature 4C
Reject food above 4C.

DELIVERY(INTAKE) CHECK (raw meat excluded)

A minimum of two chilled and one frozen high-risk product must be checked for delivery temperatures. Per each delivery.
Place the probe between the packs of food to get the correct food temperature.
You can accept chilled products at +8C or below and -15C or below for frozen products. Any product delivered outside these limits should be rejected and returned to the supplier.
Make sure that you inform your manager if you are rejecting any product.

REFRIGERATOR & FREEZER TEMPERATURE CHECKS

Complete the check 3 times per day.
On the first morning check, you can read the temperature from the dials.
For the second and the third check you must use the calibrated infrared thermometer or a probe.
The temperature must be:
Refrigerators for raw meat max 4C

Refrigerators max 5C
Freezer max -18C

MEAT PREPARATIONS:
Room temperature of the meat preparation room must be maintained below +12C.
Room temperature settings must be checked and recorded 3 times per day

COOKING SAUCES CHECKS
During the cooking process, all food must reach a core temperature of +82C for all other sauces to ensure that all bacteria that may have developed during storage are killed off.
Each batch must be checked for the core temperature

COOKING MEAT CHECKS
Check two first bag removed from the oven per each batch using sous-vide probe
Core temperature must reach 75C for 30 seconds

CHILLING SAUCES CHECK
The Temperature of the bag must reach 5C or below within 90 minutes.
Use infrared thermometer to take the temperature of each bag when removing bags from the tumble chiller.
Record the temperature of the first bag removed from the chiller for each batch/type of product.
If the temperature is not achieved, discard the food and record it in the waste log.

CHILLING MEAT CHECK
The Temperature of the bag must reach 4C or below within 90 minutes.
Use infrared thermometer to take the temperature of 3 bags per trolley (top, middle, bottom)
If the temperature is not achieved, discard the food and record it in the waste log.

DEFROST LOG
Defrost log must be completed each time product is placed for defrost.
Maximum allowed defrost time is 3 days
DISPATCH LOG
Check the product and the vehicle temperature before loading.
Refrigerated vehicle temperature <4°C, freezer vehicles <18°C.
Sauces and drinks temperature below <8ºC, meat and meat prep temperature <4°C.
Frozen sauces and drinks < -15°C, Frozen meat & meat prep < -18°C.

THERMOMETER CALIBRATION
Use the crashed ice /water solution for calibration.
The temperature of the solution is 0C.
Maximum acceptable variance is +/-0.5 C
DO NOT USE INFRARED THERMOMETER TO CHECK THE TEMPERATURE OF THE HOT FOOD

WATER TEMP CHECK
The water temperature of the hand sink and equipment wash sink should be checked and recorded weekly.
The hand sink hot water temperature should be 45C and the dishwasher 82C or above.
Cold water below <20C
If the water temperature is not within the critical limits, inform your manager

SCALES CALIBRATION

Scales Calibration must be completed weekly using 3 different calibrated weights.
If the variance on two or more weight checks is noted on the same scales that indicates that there is problem with scales.
If the variance is only present on one set of weights, it indicates there is a problem with these particular weights.

CLEANING SCHEDULE

It is the responsibility of the Duty Manager to ensure that all elements of the 'Cleaning Schedule' are carried out and signed on completion by the relevant Staff Member.
Use the relevant cleaning cards as a guide how to complete each task.

DAILY CONTAMINANT CHECKLIST

Daily contaminant checklist must be completed on the beginning of each shift prior to commencing any food preparation.
Remove any damaged equipment.
Inform your manager of any structural and equipment damage.

GLASS & BRITTLE PLASTIC REGISTER

The register must be completed once per month by CPU Manager.
Any damaged must be reported and remedial actions must be taken immediately.

MONTHLY H&S CHECKLIST

This checklist must be completed monthly and signed off by the MGT Manager.
All relevant fire safety check sheets including the Fire Risk Assessment are located inside the Fire Log.
